

80 g

**Hydroviton.CR**  
LIQUID NORMALIZING SOAP

**Hydroviton.CR®** (natural moisturizing factor) 12%

**DESCRIPTION:**

Hydroviton.CR® is a topical wash designed to normalize the physiological functions of the skin and for use in the treatment of acne vulgaris. Hydroviton.CR® is a moisturizing and soothing agent and also possesses antibacterial and keratolytic properties.

Hydroviton.CR® contains Hydroviton encapsulated in micro spheres called nanosomes. These nanosomes are 200 times smaller than human cells and penetrate deeply into the skin to release the active ingredients. The contents of nanosomes are released continuously over a 15 hour period.

**OTHER INGREDIENTS:**

Extract of chamomile and extract of rosemary.

**CLINICAL PHARMACOLOGY:**

The mechanism of action of Hydroviton.CR® is not totally understood but its antibacterial activity against Propionibacterium acnes and its normalization of sebaceous gland activity is thought to be a major mode of action. In addition, patients treated with Hydroviton.CR® show a reduction in lipids and free fatty acids and mild desquamation with a simultaneous mild reduction in comedones and acne lesions. There is no evidence of systemic toxicity caused by Hydroviton.CR® in humans.

**INDICATIONS AND USAGE:**

Hydroviton.CR® is indicated for the topical treatment of acne vulgaris, patchy skin, uneven skin tone, and to improve the over-all appearance of skin, particularly patients who have oily skin.

**CONTRAINDICATION:**

This preparation does not cause hypersensitivity to any of its components.

General: For external use only.

Carcinogenesis, Mutagenesis, Impairment of Fertility: The clinical significance of Hydroviton.CR® acting as a tumor promoter is unknown. Hydroviton.CR® has not been found to be mutagenic and there are no published data indicating it impairs fertility.

**DOSAGE AND ADMINISTRATION:**

Wash once or twice daily, avoiding contact with the eyes and mucous membranes. Wet the area of application. Apply Hydroviton.CR® wash to the hands and wash the affected areas. Rinse with water and pat dry. Or use as directed by a physician.

Nursing Mothers: Hydroviton.CR® is safe for nursing mothers.

Pediatric Use: Hydroviton.CR® can be used by children.

For the patient

**QUESTIONS AND ANSWERS:**

**Q:** Can I use a moisturizer during the day after washing my face with Hydroviton.CR?

**A:** Yes, as long as the moisturizer is appropriate for your skin type, preferably containing a sun filter.

**Q:** Does Hydroviton.CR® treatment dry the skin?

**A:** No, because drying the skin causes the body to produce even more oil, creating a vicious circle. The treatment removes excess oil whilst deeply moisturizing the skin at the same time.

**Q:** How long does it take before the first results can be seen?

**A:** Results of Hydroviton.CR® treatment can be seen after just a single application, the first time it is used.

**Q:** Can Hydroviton.CR® cause allergies?

**A:** Hydroviton.CR® is hypoallergenic and therefore does not cause allergies in the vast majority of people. In exceptional cases of hypersensitivity to one of the ingredients, treatment must be stopped immediately and medical advice sought.
