

VITEROL.A[®] 15ml

EYES AND CORNERS OF MOUTH

VITEROL.A[®] 30ml

FACE

FOR TOPICAL USE ONLY. NOT FOR OPHTHALMIC, ORAL, OR INTRAVAGINAL USE.

Viterol.A Anti-Aging Treatment minimizes and prevents the signs of aging, regardless of the process or factor that caused them. To bring about skin revitalization, this gel provokes the removal of a very small amount of the skin's surface, which in turn encourages cell replacement. It nourishes and moisturizes deep into the skin, increasing the fibers that support the skin as well as increasing collagen, elastin and new cell production. The skin becomes smoother and firmer, redefining the face's profile and leaving it more resilient to both internal and external attacks. It minimizes wrinkles, expression lines, dark patches caused by the sun and small marks left by acne and prevents them from reappearing.

DESCRIPTION:

Viterol.A is a formulation containing viatrozene gel 16%(FACE) and 29%(EYES) by weight, for topical treatment of the signs of aging. This formulation uses tiny micro spheres called nanosomes that are used to encapsulate the active ingredient, viatrozene, in a gel compound. These nanosomes are 200 times smaller than human cells and penetrate into deepest layers of the skin and gradually release the active ingredients over a 15 hour period.

Other components of this formulation: Viterol.A Treatment for Signs of Aging – FACE are Water, Glycyrrhiza Glabra (Licorice) Root Extract, Hydrolyzed Casein, Glycerin, Hydroxyethylcellulose, Acacia Senegal Gum, Sodium Pca, Tripeptide-10 Citrulline, Butylene Glycol, Sodium Lactate, Palmitoyl Oligopeptide, Palmitoyl Tetrapeptide-3, Palmitoyl Tripeptide-5, Acetyl Hexapeptide-8, Fructose, Pentapeptide-18, Glycine, Niacinamide, Xanthan Gum, Carbomer, Polysorbate-20, Inositol, Urea, Citric Acid, Sodium Hydroxide, Phenoxyethanol, Caprylyl Glycol, Potassium Sorbate, Hexylene Glycol, Lavandula Angustifolia (Lavender) Oil, Plumeria Acutifolia Flower Extract

Other components of this formulation: Viterol.A Treatment for Signs of Aging – EYES AND CORNERS OF MOUTH are Water, Glycerin, Aloe Barbadensis Leaf Juice, Cucumber Extract, Hydroxyethylcellulose, Tripeptide-10 Citrulline, Palmitoyl Tripeptide-5, Butylene Glycol, Palmitoyl Oligopeptide, Palmitoyl Tetrapeptide-3, Acetyl Hexapeptide-8, Acetyl Tetrapeptide-5, Ubiquinone, Sodium Ascorbyl Phosphate, Carbomer, Polysorbate-20, Citric Acid, Sodium Hydroxide, Phenoxyethanol, Caprylyl Glycol, Potassium Sorbate, Hexylene Glycol, Lavandula Angustifolia (Lavender) Oil, Citrus Aurantium Amara (Bitter Orange) Flower Extract

Chemically, viatrozene, is a metabolite of various peptide fragments.

MODE OF ACTION:

Although the exact mode of action of viatrozene is unknown, current evidence suggests that the effectiveness of viatrozene in the treatment of signs of aging is due primarily to its ability to normalize the epidermis and the conjunctive tissue, preventing the consequences of the aging of the skin as the reduction of the emergence of wrinkles. The viatrozene gets this effect due to the increase of the hidric barrier of the epidermis. Viatrozene renews the epithelial tissues and reduces the number of free radicals in the skin, that are generated by ultra-violet rays (UV-A and UV-B) and pollution.

CLINICAL PHARMACOLOGY:

Viatrozene is a chemically stable compound. Pharmacological profile studies have demonstrated that viatrozene is a modulator of cellular differentiation, skin firmness, and moisture barrier of the epidermis.

INDICATIONS AND USAGE:

Viterol.A (viatrozene gel), is indicated for topical application in the treatment of the signs of aging. The safety and efficacy of the use of this product in the treatment of other disorders have not been established.

CLINICAL STUDIES:

Viterol.A (viatrozene gel): In two vehicle-controlled studies, Viterol.A (viatrozene gel), applied once daily was significantly more effective than vehicle in increasing the moisture content of the epidermis, increasing water retention, and increasing skin firmness. Viterol.A (viatrozene gel) was also significantly superior to the vehicle in the investigator's global evaluation of the clinical response. In a study on the effect of firmness of the skin, patients experiences a 22% increase in skin firmness compared to 3% increase on the vehicle control.

PRECAUTIONS:

- The skin of certain individuals may become dry, irritated, or flaky. If the degree of irritation warrants, patients should be directed to temporarily reduce the amount or frequency of application of the medication or discontinue use temporarily. Efficacy at reduced frequencies of application has not been established.
- Unprotected exposure to sunlight, including sunlamps, should be minimized during the use of Viterol.A (viatrozene gel) and patients with sunburn should be advised not to use the product until fully recovered.
- Weather extremes, such as wind or cold, also may be irritating to patients under treatment with Viterol.A.

Drug Interactions: Concomitant use of potentially irritating topical products (medicated or abrasive soaps and cleansers, soaps and cosmetics that have a strong drying effect, and products with high concentrations of alcohol, astringents, spices, or lime) should be approached with caution. Particular caution should be exercised in using preparations containing sulfur, resorcinol, or salicylic acid in combination with Viterol.A.

Nursing Mothers: Viterol.A is safe for use by nursing mothers.

DOSAGE AND ADMINISTRATION

(Viterol.A Treatment for Signs of Aging – wrinkles and expression lines): Viterol.A should be applied once a day in the evening before retiring. Wash and dry the face and neck well and apply a thin film of the gel, avoiding eyes, lips, and mucous membranes. In the morning use daytime moisturizing lotion, preferably containing sun filter. Complement the treatment with Viterol.A Treatment for Signs of Aging – Eyes & Corners of the mouth.

DOSAGE AND ADMINISTRATION

(Viterol.A Treatment for Signs of Aging – eyes & corners of the mouth): Viterol.A should be applied once a day in the evening before retiring. Apply a fine layer of the lotion around the eyes and use the lotion that's left on your fingers to apply around the mouth.

For the patient

QUESTIONS & ANSWERS:

Q: How soon before noticeable results?

A: During the first week of treatment you should see smoother, firmer and more uniform skin. Viterol.A Anti-Aging Treatment progressively minimizes wrinkles, small imperfections, and the dark marks caused by the sun after the second week of continuous use.

Q: Why is it important to use sunscreen during the day?

A: During this treatment the skin is being renewed and as such requires greater protection from the harmful effects caused by the sun, the primary cause of premature aging.

Q: What is the ideal age to start using this treatment?

A: Viterol.A Anti-Aging Treatment is recommended for use for people over the age of 30, as it is around this age that the signs of aging begin to become more apparent in most people.

Q: Are there any contraindications?

A: People with sensitive skin may find that their skin is slightly irritated the first time they use the product. If this occurs, allow more time between each application until the skin becomes accustomed to the product.

Q: Can Viterol.A Anti-Aging Treatment cause allergies or irritation?

A: Viterol.A products are hypoallergenic, meaning that they do not cause allergies in most people. For people who are hypersensitive to any of the ingredients, discontinue use and consult your physician.

Q: Can I sunbathe or use artificial tanning during treatment?

A: Yes. However, because the sun is the primary cause of skin aging and the treatment's purpose is to reverse the damage caused by the sun, caution should be taken in order to prevent further damage to your skin. Use a sunscreen with a higher SPF (Sun Protection Factor) to avoid this.

Q: Can pregnant women use Viterol.A Anti-Aging Treatment?

A: We do not recommend this treatment during pregnancy. During this phase, the body is undergoing many hormonal changes and the skin becomes much more sensitive and vulnerable than usual. It is especially important to use sunscreen of at least SPF 15 during this time, leaving this particular anti-aging treatment until after the pregnancy.

Q: What is the ideal duration of this treatment?

A: This very much depends on the individual. We recommend continuous treatment for at least 30 days, although there is no restriction to continuing the treatment for a longer time period.

Q: The second time I bought Viterol.A I noticed that it was a different color. Is this normal?

A: Yes. The plant extracts contained in the cream can change color depending on the harvest or the way the plants are picked. Color changes may be more noticeable in our products due to a high concentration of these extracts and the fact that we do not use artificial colorants.
